Abstracts

Air filter is a device which removes solid airborne particles that are generally harmful to human health if inhaled in the lungs. Particles include things such as dust, powder, pollen, mold, fibers, germs etc. It uses a physical and or chemical process with fibrous pleated paper, foam, cotton, ionizers, activated charcoal, absorbents, chemicals, catalysts etc., and cleans the air to the designed breathable level and odor free for the intended user. Air filters are used in applications where air quality is important, notably in building ventilation systems, transportation, public areas and industries.

DAIKIN, Camfil Farr, CLARCOR and Flanders captured the top four revenue share spots in the Air Filters market in 2015. DAIKIN dominated with 10.44 percent revenue share, followed by Camfil Farr with 6.41 percent revenue share and CLARCOR with 5.65 percent revenue share.
