Air knife is a metal tube with an inlet to allow for the connection of an air source, and a long, continuous slit to provide a high velocity and high impact air stream. It is a tool used to blow off liquid or debris from products as they travel on conveyors. Air knives are normally used in manufacturing or as the first step in a recursive recycling process to separate lighter or smaller particles from other components for use in later or subsequent steps, post manufacturing parts drying and conveyor cleaning, part of component cleaning. The knife consists of a high-intensity, uniform sheet of laminar airflow sometimes known as streamline flow.

Air Knife Systems utilize compressed air for industrial applications that include drying, removing excess oils and liquids, dust blow off, and cooling. Though they have many different applications, common uses are removing dust, industrial debris and liquids typically found following a wash, rinse or product filling operation.

As global overall economic downward trend in the past few years, and international industry situation is complicated, in the next few years there will be many uncertainties for air knife industry. Attracted by the market potential, more and more companies have entered into air knives industry, the competition between manufacturers at home and abroad is fierce for the time being. Air knife demand has a certain space for now, but basically showing the scarcity of high-end products due to technology barrier and excess capacity of low-end products. There is increasing demand for high-end products. Despite the presence of competition problems, due to the clear global economy recovery trend and industry profits, investors are still optimistic about this area; there will

be more investments to enter the field.

Based on product types, aluminum and stainless steel air knives are the most commonly used air knife products. They composed of the most market share, plastic air knives do exist based on special needs, while in very small market share.

The global Air Knife market is valued at 63 million US\$ in 2017 and will reach 110 million US\$ by the end of 2025, growing at a CAGR of 7.0% during 2018-2025.
