Abstracts

An air seeder machine allows consistent delivery from the seed-metering device to the seedbed via an air delivery method.

The primary factors driving air seeder market are increased usage of mechanization in farmlands, shrinking arable land for farming, labor shortage, and an increased attention towards contract farming.

Air seeders also have an advantage over other types of planting equipment as they can plant thousands of seeds in a minute, distributing them evenly and accurately which saves time and labor while planting the seeds.

Despite the presence of competition problems, due to the global recovery trend is clear, investors are still optimistic about this areas, the future will still have more new investment enter the field.

As large demand of Air Seeder product, the domestic enterprises should hold the opportunity to improve their technology with domestic advantages, such as low raw material price.
