## Abstracts

Aircraft seating is a seat on an airliner in which passengers are accommodated for the duration of the journey. Some aircraft seating has basic amenities and some has advanced amenities. They are applied in economy class or coach, business class seat and first class.

First, for industry structure analysis, the Aircraft Seating industry is relatively concentrated. These manufacturers ranging from large multinational corporations to small privately owned companies compete in this industry. The top five producers account for about 90% of the revenue market. Regionally, Europe is the biggest production value area of valves, also the leader in the whole Aircraft Seating industry. Second, the production of Aircraft Seating increased from 493.66 K Units in 2011 to 770.84 K Units in 2015 with an average growth rate of more than 11%.

Third, Europe occupied 45.56% of the production market in 2015. It is followed by North America and Asia-Pacifi, which respectively have around 31.97% and 18.38% of the global total industry. Other countries have a small amount of production.

Geographically, North America was the largest consumption market in the world, which took about 31.16% of the global consumption volume in 2015.

Fourth, for price trend analysis, a key variable in the performance of Aircraft Seating producers is raw material costs, specifically the speed at which any increase can be passed through to customers.

Fifth, for forecast, the global Aircraft Seating revenue would keep increasing with annual growth rate with 8~11%. We tend to believe that this industry still has a bright future, considering the current demand of Aircraft Seating.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Aircraft

Seating 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Aircraft Seating 4900 industry.

Based on our recent survey, we have several different scenarios about the Aircraft Seating 4900 YoY growth rate for 2020. The probable scenario is expected to grow by a xx% in 2020 and the revenue will be xx in 2020 from US\$ 6722.1 million in 2019. The market size of Aircraft Seating 4900 will reach xx in 2026, with a CAGR of xx% from 2020 to 2026.
