Abstracts

Allyloxy Polyethylene Glycol (APEG) is the condensation compound of propylene glycol and epoxy ethane. It belongs to nonionic surfactant. APEG is soluble in water and many organic solvent.

EO (Ethylene Oxide) and AAL (Allyl Alcohol) are the main raw materials for the production of allyloxy polyethylene glycol (APEG).

Allyloxy polyethylene glycol (APEG) is often applied to manufacture polycarboxylate superplasticizer, which can be used in building construction, bridge construction, road construction, etc.

Allyloxy polyethylene glycol (APEG) is substituted by MPEG, HPEG and TPEG as it has some limitations for poor slump retaining performance. The consumption of allyloxy polyethylene glycol (APEG) decreased from 66754 MT in 2011 to 30329 MT in 2015, with an CARG of more than 17 %.

Clariant(DE), HAPEC(CN) and Shijiazhuang Haisen(CN) are the leaders in the global APEG market and they occupied more than 50% share in 2015.

The allyloxy polyethylene glycol (APEG) consumption declined particularly fast in China, the average speed nearly reaches 24% from 2011 to 2015. This occurred due to better performance and decreasing price of its substitutes.

The consumption share of China, Korea and Europe and Asia Other were 41.25%, 7.73%, 24.16% and 10.57% in 2015. China is the largest consumption region and the consumption share reduced more than 17% from 2011 to 2015.

The manufacturers are concentrated in China, Korea and Europe. China is the largest manufacture region and its share reached 53.13% share in 2015. At the same time, China is the main export country.
