Abstracts

Almond Oil is an oil expressed from the nuts of almond tree. It is used as an emollient in skin creams and is also used to soften ear wax. The tree is native to SW Asia but is widely grown in warm regions for its nuts. Almond trees grow to an average height of 7 m; they have attractive pink flowers and are grown for ornament in cooler regions. The sweet almond oil, or *Prunus Amygdalus Dulcis* is pressed from the ripe seeds (nut) of the almond tree. It is a versatile, carrier oil, good for all skin types. Ground almonds make for excellent natural abrasives. Moist with Sweet Almond Oil, ground almonds help replenish the oils lost from the skin during the cleansing process; being rather soft in texture, they produce a gentle massaging effect in exfoliators. Almond Oil is very lubricating and can relieve itching and inflammation; a wonderful, natural moisturizer for 'dishpan' hands and chapped skin.

At present, the production of almond oil focused in USA , Europe areas, which mainly depends on the growth environment with almond trees. Other area gradually began to commercial cultivation, but small in number.

Currently, it is in USA , China and Australia, the output area is greater than the needs of the region, and therefore, these areas is a major exporter, accounting for 80 percent of global exports.

Currently, the production of almond oil is mainly subject to climate and downstream applications, now almond oil application growth has been concentrated in cosmetic and foods, demand in the cosmetic industry is relatively stable.

As the production of almond oil has certain harm to the environment, especially forests and wildlife habitat, and therefore, the Government has increased its investment in environmental protection, which makes the manufacturer's profit decline.

Currently, for new entrants to the investors, we recommend to increase R & D investment in the almond oil in biofuels and industrial applications, which is conducive to grasp the future of almond oil trend.
