Abstracts

This report studies the Aluminium Powder market, Aluminium powder is powdered aluminium. This was originally produced by mechanical means using a stamp mill to create flakes. Subsequently, a process of spraying molten aluminium to create a powder of droplets was developed by E. J. Hall in the 1920s. The resulting powder might then be processed further in a ball mill to flatten it into flakes for use as a coating or pigment. Aluminium powder is non-toxic and is not harmful unless injected directly in a major blood vessel such as the aorta Aluminium powder, if breathed in, is not particularly harmful and will only cause minor irritation. The melting point of aluminum powder is 660 °C.

According to QYResearch's new survey, global Aluminium Powder, Pastes and Pigments market is projected to reach US\$ 1276.7 million in 2029, increasing from US\$ 1092.8 million in 2022, with the CAGR of 2.2% during the period of 2023 to 2029.

Asia-Pacific is the largest region of Aluminium Powder, with a market share about 50%, followed by Europe and North America, etc. Alcoa, Kymera International, UC RUSAL, Toyal Group and Xinfa Group are the top 5 manufacturers of industry, and they had about 40% combined market share.
