Abstracts

Ammonia, a colourless and nonflammable gas with a characteristic pungent smell, is a compound of nitrogen and hydrogen with the formula NH_3 . Ammonia is shipped as a liquified gas under its own vapor pressure of 114 psig. Most extensive use is in soil fertilization. This application is used in the form of salts, nitrates and urea.

According to the statistics, ammonia industry concentration is relatively low. The top ten manufacturers were counted for about 18.19% production market share in 2015. In this report, we list the top twenty-eight enterprises including Yara? CF Industries? Agrium? Group DF? Qafco? PotashCorp? TogliattiAzot? Eurochem and Acron etc.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Ammonia 3900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Ammonia 3900 industry.
