## Abstracts

Ammonium chloride,  $\text{NH}_4\text{Cl}$ , is an inorganic, mildly acidic, white crystalline salt compound that is highly soluble in water. The mineral is commonly formed on burning coal dumps due to condensation of coal-derived gases. It is also found around some types of volcanic vents. It is used as a flavoring agent in licorice. Ammonium chloride is the product from the reaction of hydrochloric acid and ammonia.

Ammonium chloride is obtained as a by-product in different chemical processes, particularly from the Solvay process for production of sodium carbonate from sodium chloride, ammonia, carbon dioxide and water.

In the world wide, giant manufactures mainly distribute in China. Hubei Shuanghuan and CNSG have long history and unshakable status in China. Jinshan Chemical was developing fastly last years.
