Abstracts

This report studies the global Ammunition market status and forecast, categorizes the global Ammunition market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Ammunition is the material fired, scattered, dropped or detonated from any weapon. Ammunition is both expendable weapons (e.g., bombs, missiles, grenades, land mines) and the component parts of other weapons that create the effect on a target (e.g., bullets and warheads). Nearly all mechanical weapons require some form of ammunition to operate.

USA and Europe are the mainly consumption regions due to the bigger demand of downstream applications. In 2016, these two regions occupied 47.88% of the global consumption volume in total.

Ammunition has three types, which include small caliber ammunition, medium caliber ammunition and large caliber ammunition. And each type has application industries relatively. With increasing demand of defence and military, the downstream application industries will need more ammunition. So, ammunition has a huge market potential in the future.

We tend to believe this industry is a rising industry, and the consumption increasing degree will show a smooth growth curve. And the price presents increasing trend according to the economy development status and international competition. Also, there is fluctuation in gross margin.

The global Ammunition market is valued at 9590 million US\$ in 2017 and will reach 12800 million US\$ by the end of 2025, growing at a CAGR of 3.7% during 2018-2025.
