## Abstracts

An AMOLED display consists of an active matrix of OLED pixels generating light (luminescence) upon electrical activation that have been deposited or integrated onto a thin-film-transistor (TFT) array, which functions as a series of switches to control the current flowing to each individual pixel.

At present, the OLED Display industry is still in the developing stage, the world's large production are mainly concentrated in Korea. The technology and market share is monopolized by Samsung and LG. Many manufacturers are in the research level and begin to mass production in 2015. Like EDO, established in 2012 in China, announce the AMOLED Display capacity is 15K/month. And JOLED Inc, joint venture of Japan Display, Sony and Panasonic, which set up to break the monopoly of Samsung and LG, JOLED will mainly target laptops and tablets.

2. AMOLED will become the mainstream in future, and as PMOLED advantage will gradually be replaced by AM-OLED, market share will shrink, but the global OLED market stage is still the coexist of AM-OLED and PMOLED.

Due to the addition of manufacturers and project investments, Global OLED market have brought more competitive, but the manufacturers which mastered the core technology of OLED and has a long industrial chain business has a cost advantage.

With the development of consumer electronics and wearable devices, China will become the world's largest OLED consumption market, many manufacturers have invested lot of money in the technology research and production line construction.

OLED Display is a high technology industry, especially the manufacturing material and equipment. With the downstream application area expand, the cost will decrease. If it replace the LCD/LED, the market is very huge. Although OLED Display brings a lot of opportunities, the research group recommends the new entrants just having money but without technical advantage and upstream and downstream support do not to enter into this field.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
