Abstracts

Amorphous graphite is a naturally occurring seam mineral that forms from the geologic metamorphism of anthracite coal. Contrary to the name, 'amorphous' graphite is not truly amorphous, but is a microcrystalline form of natural graphite. The morphology of amorphous graphite is typically granular except in extremely fine grinds, which have a flakey structure.

The top producers are mainly from China, Canada and Austria. South Graphite and Botai Graphite from China, Grafitbergbau Kaisersberg Ges.m.b.H from Austria, while Fortune Graphite from Canada. The top three manufacturers occupy for nearly 50 percent global market share.

South Graphite is the largest producer of Amorphous Graphite in China, this company is state-owned firm established through merging many small plants. In past few years, more and more small manufacturers halt production due to environmental protection, and in future, the market concentration ratio in China will be higher, and the big manufacturers will develop high value-added products and will be more competitive.
