Androstenedione: 4-Androstenedione (androst-4-ene-3,17-dione) – an endogenous weak androgen and estrogen and intermediate to/prohormone of testosterone.

Androstenedione is used to evaluate the function of the adrenal gland and the ovaries or the testicles as well as the production of hormones related to the development of male sex organs and physical characteristics (androgens). It is most commonly used to determine the cause of symptoms of excess androgens in a woman who has an elevated testosterone level, along with a few other laboratory tests for this purpose.

Androstadienedione (1,4-androstadiene-3,17-dione) is an important industrial precursor for various steroid hormones. Androstadienedione is an important industrial-scale precursor for a wide variety of steroid hormones within the estrane and androstane classifications.
