Abstracts

Animal model is a living, non-human animal used during the research and investigation of human disease, for the purpose of better understanding the disease without the added risk of harming an actual human being during the process.

According to QYResearch's new survey, global Animals Used in Research and Testing market is projected to reach US\$ 5044 million in 2029, increasing from US\$ 3152 million in 2022, with the CAGR of 7.0% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Animals Used in Research and Testing market research.

The animal model market is driven by the increasing demand for effective research tools to understand human diseases and develop new therapies. Animal models play a crucial role in studying disease mechanisms, drug safety, and efficacy, leading to advancements in medical research and pharmaceutical development. Additionally, the rise in chronic diseases and infectious outbreaks has propelled the need for animal models to study disease pathogenesis and evaluate potential treatments. However, challenges include ethical concerns related to animal experimentation, the need for appropriate models that accurately mimic human diseases, and the high cost and complexity of maintaining animal facilities and conducting experiments. Addressing these challenges through ethical guidelines, technological advancements, and the development of alternative research methods will be essential for the sustained growth of the animal model market.
