1 Antenna, Transducer and Radome (ATR) Market Overview

1.1 Product Overview and Scope of Antenna, Transducer and Radome (ATR)

Antenna, Transducer and Radome are devices that converts one of signal to another.

Usually a transducer converts a signal in one form of energy to a signal in another.

Antenna, Transducers and Radome are often employed at the boundaries of automation, measurement, and control systems, where electrical signals are converted to and from other physical quantities (energy, force, torque, light, motion, position, etc.).

The process of converting one form of energy to another is known as transduction.
