## Abstracts

Anticholinergic drugs are used to restrict the acetylcholine-provoked neurotransmission in different parts of the body including heart, peripheral nervous system, and other parts. Acetylcholine controls the involuntary functions such as salivation, sweating, digestion, and several others. The drug is used for the treatment of chronic diseases and nervous system disorders such as bladder overactivity, pulmonary disease disorder, irritating bowel syndrome, and several others.

According to QYResearch's new survey, global Anticholinergic Drug market is projected to reach US\$ 8996.2 million in 2029, increasing from US\$ 6015 million in 2022, with the CAGR of 5.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Anticholinergic Drug market research.

The Anticholinergic Drug market is driven by its application in various medical fields, including neurology, psychiatry, and urology. Anticholinergic drugs act by blocking the neurotransmitter acetylcholine, providing relief from conditions like overactive bladder, motion sickness, and certain neurological disorders. The growing prevalence of conditions that these drugs address, coupled with advancements in drug development, fuels market growth. However, challenges include potential side effects such as dry mouth, constipation, and cognitive impairment, which can limit their use, particularly in elderly populations. Striking a balance between therapeutic benefits and minimizing adverse effects remains a concern. Moreover, the potential association of long-term anticholinergic use with cognitive decline and dementia poses ongoing challenges. The market's success relies on thorough research into drug safety and efficacy, ongoing medical education to guide appropriate prescription practices, and the development of

alternative treatment strategies to address the challenges associated with anticholinergic drugs.
