Abstracts

Antimony(III) oxide is the inorganic compound with the formula Sb_2O_3 . It is the most important commercial compound of antimony. Antimony trioxide is produced from stibnite ores (antimony trisulfide) or as a by-product of lead smelting and production. It is used mainly in fire-retardant formulations for plastics, rubbers, textiles, paper and paints.

According to QYResearch's new survey, global Antimony (III) Oxide market is projected to reach US\$ million in 2029, increasing from US\$ million in 2022, with the CAGR of % during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Antimony (III) Oxide market research.

Resources are highly scarce and supply continues to shrink. The content of antimony in the earth's crust is only 0.0001%. According to USGS data, the global antimony resource reserves in 2021 are about 2 million tons, and the distribution is uneven. China, the United States, the European Union, Japan, and Australia all list antimony as a key mineral resource. The supply of antimony ore in China has shown a downward trend due to policy factors, increased environmental protection requirements, and increased mining difficulty. Although overseas production has increased, it has fluctuated greatly. At present, the global supply of antimony ore has dropped by nearly half since its peak. With the steady growth of global plastic consumption and the continuous improvement of flame retardant regulations and standards in various countries, the demand for flame retardants continues to increase. Although with the increasing awareness of environmental protection, halogen-free has become a trend in the field of flame retardants, new harmless halogenated flame retardants are being

continuously developed, and the excellent characteristics of brominated flame retardants cannot be completely replaced, making halogenated flame retardants Flame retardants and antimony trioxide still occupy an important position in the flame retardant market.
