Abstracts

Color coated board for home appliances are pre-coated sheets, which are pre-coated product made of metal coil as the base material and coated or laminated with various organic coatings or plastic films on the surface. The home appliance color-coated sheet series products are widely used and have bright colors. They not only have the strength of steel sheets and good formability, but also have good corrosion resistance and flexibility of paint films.

According to QYResearch's new survey, global Appliances Color Coated Board market is projected to reach US\$ 3846.2 million in 2029, increasing from US\$ 3151 million in 2022, with the CAGR of 2.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Appliances Color Coated Board market research.

At present, the application of household appliance appearance materials also includes other materials such as color steel glass, and there is a certain degree of mutual substitution and competition between various materials. With the advancement of material technology and the continuous change of consumer preferences, the upgraded VCM/PCM series products with better performance and appearance, which can better meet the needs of consumers, will be at risk of being replaced by new materials. Color-coated board products were mainly used in major home appliances in the past, but in recent years there has been a trend of extending the application range to kitchen and bathroom appliances, small home appliances and consumer electronics. It is expected that the overall proportion will remain the same in the next few years. Among the small household appliances, microwave ovens, water heaters, set-top boxes and other products are the main development targets.
