Farmers often face challenges and issues such as poor infrastructure, low connectivity, unmet demands for animal proteins, and rapidly spreading disease amongst livestock. AI Technology is disrupting all industries in the modern age and livestock management is no exception. Since the past few years, the entire dairy and livestock industry has drastically changed due to the augmentation of disruptive digital transformation, which has made traditional procedures simpler and has helped farmers make data-driven decisions. With the launch of AI technologies in livestock farming, many farmers were able to accelerate their livestock production, overall revenue, enhance livestock health and carefully monitor budding diseases that could likely be a threat to the animals.

According to QYResearch's new survey, global Artificial Intelligence in Livestock Farming market is projected to reach US\$ 26620 million in 2029, increasing from US\$ 6765 million in 2022, with the CAGR of 21.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Artificial Intelligence in Livestock Farming market research.

China and the United States are two leaders in AI industry. On the AI 100 list (2022) released by CB Insights, the number of companies in the United States ranks first, with more than 70 companies, followed by the United Kingdom, with 8 companies on the list. China and Canada both holds 5 companies on the list. According to data from the China Academy of Information and Communications Technology, the scale of China's core artificial intelligence industry reached \$508 billion in 2022, a year-on-year increase of 18%. From 2013 to November 2022, the cumulative number of patent applications for artificial intelligence inventions in the world reached 729,000, and the cumulative

number of applications in China reached 389,000, accounting for 53.4%. However, the Global Artificial Intelligence Innovation Index Report 2021 released by the China Institute of Scientific and Technological Information shows that the overall strength of the United States is still far ahead. The number of artificial intelligence companies in the United States is about 4,670, while China has only 880. China's data center is less than 1/77 of that of the United States.
