Abstracts

ATS Fertilizer is the most widely used fluid fertilizer that contains sulfur; it is composed of sulfur dioxide, elemental sulfur, and aqueous ammonia. It is widely used in the fluid fertilizer industry to make a wide range of N-P-K-S fertilizers. However, it is not compatible with acidic solutions, and not with anhydrous ammonia. And it decomposes in the soil to form equal amount of sulfate, suitable to the S uptake patterns for most crops.

According to QYResearch's new survey, global ATS Fertilizer market is projected to reach US\$ 346.7 million in 2029, increasing from US\$ 276 million in 2022, with the CAGR of 3.5% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole ATS Fertilizer market research.

The production regions of ammonium thiosulfate are mainly located in North America, Europe and South America. North America was the leading production regions. As for the region consumption, North America remained the largest market for ammonium thiosulfate in the world. Other major consuming regions include Europe and South America. The trading of ammonium thiosulfate is not frequent, though ammonium thiosulfate can be detected to be transformed from North America to South America. High price and transportation fee, and lacking awareness of sulfur fertilizer might be the main reason for the situation. As the development of ammonium thiosulfate in global regions, the market would be expanded greatly.
