Abstracts

This report studies the global Auto Relay market status and forecast, categorizes the global Auto Relay market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Auto Relays are electrically operated switches used for automotive applications. Relays are used where it is necessary to control a circuit by a low-power signal (with complete electrical isolation between control and controlled circuits), or where several circuits must be controlled by one signal.

Auto Relays of different sizes are found in every type of land or sea vehicle. They are often used to enable a low amperage circuit to switch a higher amperage circuit on or off. An example would be turning headlights on. Auto Relays also allow items to switch at the same time by using a single output, therefore allowing one to simultaneously open and/or close continuity on multiple items. Average relay demand of per vehicle is about 20.

The global Auto Relay market is valued at 3850 million US\$ in 2017 and will reach 4370 million US\$ by the end of 2025, growing at a CAGR of 1.8% during 2018-2025.
