Abstracts

Automated Blood Cell Counter is an instrument that uses the imaging principle of a microscope and counts the number of cells or tiny organisms per unit volume with the help of a blood cell counting plate.

Under normal circumstances, the production and destruction of blood cells are in a dynamic balance, so the quantity and quality of blood cells in the blood remain relatively stable. Regardless of the cause of abnormal blood cell production and destruction, it will cause changes in the quantity or quality of blood cells, leading to the occurrence of diseases.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Automated Blood Cell Counter market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Automated Blood Cell Counter industry.
