## Abstracts

An automated (car) parking system (APS) is a mechanical system designed to minimize the area and/or volume required for parking cars. Like a multi-story parking garage, an APS provides parking for cars on multiple levels stacked vertically to maximize the number of parking spaces while minimizing land usage. The APS, however, utilizes a mechanical system to transport cars to and from parking spaces (rather than the driver) in order to eliminate much of the space wasted in a multi-story parking garage. While a multi-story parking garage is similar to multiple parking lots stacked vertically, an APS is more similar to an automated storage and retrieval system for cars.

According to QYResearch's new survey, global Automatic Car Parking Systems market is projected to reach US\$ 3066.1 million in 2029, increasing from US\$ 2338 million in 2022, with the CAGR of 4.6% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Automatic Car Parking Systems market research.

The expansion of the infrastructure industry drives the marketplace for automated parking system. Along with growing number of luxury and high-rise buildings, rinsing support from government bodies, and the increasing willingness of developers to put in an automatic parking system. The expansion of the infrastructure industry is predicted to supply tremendous opportunities for installing an automated parking system in under-construction and newly constructing buildings.
