Abstracts

Automatic overhead conveyor systems are unique from other conveyor types in that they operate above – or over – the head of both workers and other equipment. They maximize conveyance by utilizing unused overhead space, and do so via a revolving, endless loop of chain within a rigid track, or a straight run of trollies.

According to QYResearch's new survey, global Automatic Overhead Conveyor System market is projected to reach US\$ 1967.5 million in 2029, increasing from US\$ 1522 million in 2022, with the CAGR of 3.8% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Automatic Overhead Conveyor System market research.

The Asia Pacific is expected to be the fastest-growing market over the forecast period owing to extensive usage in the industrial and logistics field. This can primarily be attributed to the considerable Chinese market, which contributes significantly to global volume as well as revenue generation. Although average selling prices are lower in the Asia Pacific, high demand is expected to result in sizable market revenue over the next five years. In this study, the sales market for overhead conveyor system was divided into five geographic regions. Asia-Pacific occupied the largest sales value market share in 2022. It is followed by Europe and North America. The consumption of overhead conveyor system is related to downstream industries and the global economy. As there will always be some uncertain in the global economy in the following years, the growth rate of overhead conveyor system industry may not keep that fast. But it is surely forecasted that the market of overhead conveyor system is still promising.
