Abstracts

Automobile Carburetor is the device inside an internal combustion engine that provides the area for air and gasoline to mix them together so that the engine runs properly. If there is not enough fuel mixed with the air, the engine 'runs lean' and either will not run or potentially damages the engine. If there is too much fuel mixed with the air, the engine 'runs rich' and either will not run (it floods), runs very smoky, runs poorly (bogs down, stalls easily), or at the very least wastes fuel.

Globally, the automobile carburetor industry market is not that concentrated as the manufacturing technology of automobile carburetor is relatively much more mature than some high-tech equipment. But some enterprises are still well-known for the wonderful performance of their automobile carburetor and related services. At the same time, some countries such as Japan and USA are remarkable in the global automobile carburetor industry because of their market share and technology status of Carburetor. The consumption volume of automobile carburetor is related to downstream industries and global economy. Due to stricter exhaust emissions regulations, government policy and the emergency of new technology, like electronic fuel injection systems (FI Systems), the automobile carburetor industry is a sunset industry for motorcycle & powersports and car industry.

The product average price declined in the past few years due to the market competition, the average price will keep the trend in the few future years due to most of Chinese manufacturers will enter the industry.

Motorcycle & powersports experienced an accelerated transition from automobile carburetor to electronic fuel injection systems (FI Systems), but a majority of motorcycles still utilize carburetors due to lower cost and throttle response problems with early injection set ups.

On new cars, fuel injection is becoming nearly universal because it provides better fuel efficiency and lower emissions. But nearly all older cars needing carburetor replacement

and specialized automobiles, such as those designed for stock car racing, use carburetors.

Automobile carburetor are still found in small engines like lawn mowers and chain saws use carbs because they are simple and inexpensive.

Although the market competition of automobile carburetor is fierce globally, there are many enterprises can obtain considerable profit form the manufacturing and marketing of automobile carburetor and that is the reason that we believe there will also be enterprises enter this market. But it is suggested that enterprises those have plans to enter this industry have careful analysis of this market and the advantages or disadvantages of themselves.
