## Abstracts

EGR system is considered one of the most reliable technologies among various NO<sub>x</sub> and CO<sub>2</sub> emission reduction techniques used in the automotive industry. All the major automakers are incorporating downsized engines to meet the stringent emission regulations imposed by regulatory authorities as well as to rely on customer demand for higher-performance vehicles. The downsized engine generally uses a turbocharger, which increases the density and temperature of the air in the air intake manifold. EGR systems play a vital role in diverting the exhaust gas back to the engine's intake. Some of the key advantages of the EGR system in gasoline engines are reduced throttling loss, reduced heat rejection, and reduced chemical dissociation. It also reduces the knock limit by a higher compression ratio, providing better fuel economy.

According to QYResearch's new survey, global Automotive Gasoline EGR System market is projected to reach US\$ 1687 million in 2029, increasing from US\$ 1348.3 million in 2022, with the CAGR of 3.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Automotive Gasoline EGR System market research.

Automotive is a key driver of this industry. According to data from the World Automobile Organization (OICA), global automobile production and sales in 2017 reached their peak in the past 10 years, at 97.3 million and 95.89 million respectively. In 2018, the global economic expansion ended, and the global auto market declined as a whole. In 2022, there will wear units 81.6 million vehicles in the world. At present, more than 90% of the world's automobiles are concentrated in the three continents of Asia, Europe and North America, of which Asia automobile production accounts for 56% of the world, Europe accounts for 20%, and North America accounts for 16%. The world major

automobile producing countries include China, the United States, Japan, South Korea, Germany, India, Mexico, and other countries; among them, China is the largest automobile producing country in the world, accounting for about 32%. Japan is the world's largest car exporter, exporting more than 3.5 million vehicles in 2022.
