Abstracts

Grease is a liquid lubricant with a solid or semi-fluid thickener, such as soap or PTFE. Grease fulfills the same requirements as other lubricants – to reduce friction and wear, protect against corrosions, and to dissipate heat. Automotive Grease is used in bearings, joints, hinges and other components. Automotive grease avoids sticking and squeaking thus preventing components wearing out prematurely, whilst shielding against moisture and corrosion. Automotive grease consists of oil or other fluid lubricant that is mixed with a thickener, typically a soap, to form a solid or semisolid.

Considering the development of downstream industry, we estimate that the growth of automotive grease market size will continue to grow in the next five years with a 2.50% compound average growth rate to 2021.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Automotive Grease 4900 market in 2020.

COVID-19 can affect the global economy in three main ways: by directly affecting production and demand, by creating supply chain and market disruption, and by its financial impact on firms and financial markets.

The outbreak of COVID-19 has brought effects on many aspects, like flight cancellations; travel bans and quarantines; restaurants closed; all indoor events restricted; over forty countries state of emergency declared; massive slowing of the supply chain; stock market volatility; falling business confidence, growing panic among the population, and uncertainty about future.

This report also analyses the impact of Coronavirus COVID-19 on the Automotive Grease 4900 industry.
