# **Abstracts**

With the improvement of automotive intelligence, the demand for automotive lenses will increase rapidly: vision applications are considered to achieve the next important comfort and safety function in the process of autonomous driving. In addition, it has become the standard for autonomous driving and ADAS applications, enabling sensor fusion technology. This technology combines and processes information collected from on-board cameras and radar to identify the environment around the car. All cars are expected to be equipped with a 360-degree surround view system. In addition, rearview mirrors will be replaced by on-board cameras, and autonomous driving will require driver monitoring to improve safety. Electronic rear-view mirrors based on vehicle cameras will implement object detection, viewing angle modification, and zoom functions.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Automotive Optics Lens market in 2020.
