## Abstracts

This report studies the global Automotive Slack Adjuster market status and forecast, categorizes the global Automotive Slack Adjuster market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Automotive slack adjuster is a main component that keeps the brake shoes at the proper distance from the surface of the brake drums. As the brake shoes and the brake drums wear down, the automatic slack adjusters will automatically adjust the brake shoes so that the shoes remain at the proper distance from the drums. If the brake shoes lock up within the brake drums, the automatic slack adjusters must be manually adjusted to release the brakes.

The growth rate of vehicles production may be slow in Europe and US. While in Asian region, especially in China, the automotive slack adjuster industry will get a large development due to the development of automotive industry.

Due to the advantage of automatic slack adjuster, more and more countries issue regulation to promote the application of automatic slack adjuster. Automatic slack adjuster market will keep growing faster than manual slack adjuster.

The top 2 companies occupy about 30% of the global production. Restricted by the technical conditions, Chinese manufacturers have to spend more and more money and time on research and development so that they can win more market share.

The global Automotive Slack Adjuster market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
