## Abstracts

Automotive Stabilizer Bar is part of automotive suspensions which helps reduce the automotive body roll of a vehicle during fast cornering or over road irregularities. It connects opposite wheels together through short lever arms linked by a torsion spring. Generally, one automotive installs one unit, which mainly locates in the front axis. In addition, some high-end cars may install two units.

The automotive stabilizer bar industry is relatively concentrated, the production of top ten manufacturers account about 60% of global production. The high-end products mainly come from Europe and China.
