Abstracts

An automotive piston is a tubular piece of metal that moves up and down inside the cylinder of an engine). The piston generates mechanical energy that provides the necessary power to drive the shaft and consequently the wheels of an automobile. In an engine, the automotive piston primarily functions by transferring force from expanding gas in the cylinder to the crankshaft via piston rod or with the help of a connecting rod. The global average price of Automotive Steel Piston is in the decreasing trend, from 9.5 USD/Unit in 2011 to 8.8 USD/Unit in 2015. With the situation of global economy, prices will be in decreasing trend in the following five years.
