## Abstracts

This report studies the global Automotive Water Valves market status and forecast, categorizes the global Automotive Water Valves market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Automotive water valves are used to switch the different cooling water circuits on and off.

Optimization of the interior temperature of the vehicle in conjunction with best possible control of the heat input and cooling of the engine and its partial circulatory systems are achieved through successful thermal management. Water valves help to selectively control and regulate water circuit temperatures at central points. As a result, for example, the warm-up phase can be significantly reduced, thus saving fuel and reducing CO2 emissions.

Due to the stable development of global automotive market, the demand for automotive water valves product is relatively stable. Meanwhile, the demand from China market was much higher due to the rapid development of Chinese automotive market.

In 2016, the global production of automotive water valves reaches over 300 million units; the CAGR of global automotive water valves market is around 4.68% during the last several years.

The concentration degree of automotive water valves market is much lower, though the major manufacturers like Mahle, Hanon System and Borgwarner occupied about considerable market share, there are many other manufacturers due to the mature manufacturing technology.
