Abstracts

Automotive wire is an important part of automotive electronic control system. It is bonded, twisted, or braided together to form a single assembly as the circuit in an automotive. Automotive wires are used to transmit electric power, data and other signals as voice in the vehicles. The working environment required the wire to have characteristics like high temperature resistant.

Wire are vital components within modern transportation platforms such as aircraft and automobiles, distributing power and signals between the various devices that deliver electrical and electronic functionality.

Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency. The global impacts of the coronavirus disease 2019 (COVID-19) are already starting to be felt, and will significantly affect the Automotive Wire 4900 market in 2020.
