## Abstracts

Autonomous Driving Sweepers are mainly used for road cleaning, with low driving speed, low hardware requirements, repetitive and fixed driving routes, no need to over-consider vehicle comfort, and relatively simple human-computer interaction.

According to QYResearch's new survey, global Autonomous Driving Sweeper market is projected to reach US\$ 702.6 million in 2029, increasing from US\$ 452 million in 2022, with the CAGR of 6.3% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Autonomous Driving Sweeper market research.

Autonomous driving sweepers represent an emerging technology in the realm of intelligent transportation, combining autonomous driving capabilities with sweeping technology to enhance urban road cleaning efficiency and reduce labor costs. While there have been some pilot projects and commercial deployments of autonomous driving sweepers in the market, the overall scale remains relatively small. With continuous technological advancements and increased investments, it is anticipated that the market for autonomous driving sweepers will gradually expand in the coming years, playing an increasingly vital role in urban environment maintenance. However, this market still faces challenges related to technological maturity, regulations, and safety standards, necessitating collaborative efforts from stakeholders across the industry to foster its development.
