Abstracts

Baby warmer i.e., radiant warmer, is a body warming device to provide heat to the body. This device helps to maintain the body temperature of the baby and limit the metabolism rate.

According to QYResearch's new survey, global Baby Warmer market is projected to reach US\$ 134.1 million in 2029, increasing from US\$ 106 million in 2022, with the CAGR of 2.9% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole Baby Warmer market research.

Baby warmers have been one of the fastest growing medical products in recent years. In China, foreign products occupy the high-end market, while domestic products are concentrated in the low-end market. With the support of China's policies, China's industrial prospects are very broad. With the development of science and technology, baby radiant heaters are increasingly diversified and humanized. Meanwhile, upgrading baby radiant warmers could meet more needs in developing countries. From the perspective of production, Asia is the largest, and the consumption in Asia is also the largest, because the proportion of newborns in Asia is larger and more. The growth rate of the product will be reduced due to slow product replacement and a decrease in the growth rate of newborn babies. Industry production is concentrated, mainly in companies in the United States, Germany, and Japan. Due to the high profit margins of manufacturers in this industry, it is expected that a number of enterprises will enter the industry in the next few years.
