## Abstracts

Ball screws are force and motion-transfer devices in the family of power-transmission screws. They operate like conventional power screws but the rolling friction of bearing balls replaces sliding friction. Ball screws consist of a screw, nut, and balls that operate similarly to bearing components.

Ball screw can be classified by different index, such as type of nuts, direction of pitch, flange, precision class, model, preload types, etc. Ball screws are mainly used for semiconductor and LCD production equipment, machine tools and injection molding machines, engraving Equipment, medical equipment and laboratory equipment, etc. Since the COVID-19 virus outbreak in December 2019, the disease has spread to almost 100 countries around the globe with the World Health Organization declaring it a public health emergency.
