Abstracts

A ball valve is a device with a spherical closure unit that provides on/off control of flow. The sphere has a port, also known as a bore, through the center. When the valve is positioned such that the bore is aligned in the same direction as the pipeline, it is in open position and fluid can flow through it. When rotated 90 degrees, the bore becomes perpendicular to the flow path, meaning the valve is closed and the fluid cannot pass through.

Tyco, Emerson Electric, Flowserve and Kitz captured the top four revenue share spots in the Ball Valve market in 2015. Tyco dominated with 4.61 percent revenue share, followed by Emerson Electric with 3.61 percent revenue share and Flowserve with 2.97 percent revenue share.
