The ballast water system is mainly composed of ballast water pumps, ballast water pipelines, ballast tanks and related valve parts. The role of the system is to inject or discharge the ballast tanks of the whole ship in accordance with the needs of ship operations to achieve adjustments. The stable and safe height of the ship's draught and longitudinal and transverse hull; reduce the hull deformation, so as not to cause excessive bending moment and shear force, reduce the hull vibration; improve the airworthiness of the empty cabin.

While ballast water systems are important for effective shipping operations, it also has health and ecological issues arising out of unauthorized ocean dumping, oil & chemical spills, and the introduction of aquatic invasive species. Among the stated issues, the introduction of aquatic invasive species into new atmospheres is a key intimidating issue. Asia Pacific is expected to witness the fastest growth over the forecast period on account of increase in production and sales of ballast water treatment systems owing to increase in trade of automotive machinery & equipment, cosmetics, food & beverages, building & infrastructure materials, medical & healthcare, and mining equipment. The region has witnessed an increase in ocean freight volumes from various countries such as China, India, and South Korea.
