## Abstracts

A bias tire consists of multiple rubber plies overlapping each other. The crown and sidewalls are interdependent. The overlapped plies form a thick layer that is less flexible and more sensitive to overheating.

A bias tire will have a stiffer sidewall and shoulder, which will increase heat buildup in the tire.

On a bias tire, the cords run at a 32 degree angle from the direction of travel. The B, C, and D is the load range of a tire. This is the maximum weight that the tire can carry at a specified maximum load inflation. The B is a 4-ply rated tire, the C is a 6-ply rated tire, and the D is an 8-ply rated tire.
