Abstracts

Bilirubin is a yellow breakdown product of normal heme catabolism, is mainly extracted from animal bile, and is the main pigment in bile. It mainly comes from cattle and pigs. Bilirubin is not only on the human body with detoxification, sedative anticonvulsant, antipyretic, antihypertensive effect, but also to promote red blood cells to improve neonatal immune regeneration. It is the main raw material to manufacture artificial bezoar, or health products, cosmetics, other industries.

The Bilirubin demand is under the influence of the artificial bezoar industry, and the artificial bezoar industry development is affected by the national policy and people health level. And the demand is limited because of the raw materials and the downstream application.

The bilirubin manufacturers are concentrated in China. And China is the largest producer and consumer in the world. The capacity and production has maintained steady growth in the past several years and it will keep a stable growth speed in the future due to the limited demand of Bilirubin.

Due to the raw materials coming from the animals' gall, and the animal disease will have occurred not sure what time, so there are some potential risks in this industry. And due to different laws and regulations of China and developed countries, the price and production is maybe affected by some uncertainties.

Although sales of Bilirubin brought a lot of opportunities, the study group recommends the new entrants that just having money but without technical advantage and downstream support do not enter into the bilirubin field.
