Abstracts

This report studies the global Bio-ethanol market status and forecast, categorizes the global Bio-ethanol market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Bio-ethanol is an alcohol made by fermentation, mostly from carbohydrates produced in sugar or starch crops such as corn, sugarcane, or sweet sorghum. Cellulosic biomass, derived from non-food sources, such as trees and grasses, is also being developed as a feedstock for ethanol production.

As a basis raw material, Bio-ethanol is mainly added in gasoline, in order to reduce the consumption of fossil fuels. Downstream consumers are very single, so the manufacturer's bargaining space is very limited

The product is in transition, the Chinese market is still very unstable, and its' price depends on the policy; while some of his shortcomings also make consumers do not like to use the gasoline added bio-ethanol. On the other hand, it also prevented the promotion of this product.

The study group felt that the industry faced considerable uncertainty, the regulations at the national and local government levels were inadequate and that caution was needed to enter the market.

The global Bio-ethanol market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
