Abstracts

Biochar is the solid product of pyrolysis, designed to be used for environmental management. IBI defines biochar as: A solid material obtained from thermochemical conversion of biomass in an oxygen-limited environment.

The industry is highly fragmented in terms of products, end uses and suppliers, but its markets can broadly be categorized as soil amendment, fertilizer and others. Until 2015, USA overall was the dominant producer and exporter of biochar, followed by Europe. Also, strong growth in emerging markets, especially in China is distinctive. Globally, biochar producers are concentrated in USA. Leading players in biochar industry are Diacarbon Energy, Agri-Tech Producers, Biochar Now, The Biochar Company, and ElementC6.

The largest consumption area of biochar is soil conditioner, which accounted for 50.06% of world biochar consumption. Also, large quantities of biochar are used directly as fertilizer blend. Biochar can be used as energy source, including bio-oil.
