A biopharmaceutical, also known as a biologic (al) medical product, biological, or biologic, is any pharmaceutical drug product manufactured in, extracted from, or semi-synthesized from biological sources. Different from totally synthesized pharmaceuticals, they include vaccines, blood, blood components, allergenic, somatic cells, gene therapies, tissues, recombinant therapeutic protein, and living cells used in cell therapy. Biologics can be composed of sugars, proteins, or nucleic acids or complex combinations of these substances, or may be living cells or tissues. They (or their precursors or components) are isolated from living sources—human, animal, plant, fungal, or microbial.

It is costly to discover and develop new drugs/medicines due to expensive research processes, Costs associated with clinical trials, resource-intensive approval procedures and costs associated

With manufacturing (if the trials are successful).
