Abstracts

This report studies the global Biopharmaceuticals market status and forecast, categorizes the global Biopharmaceuticals market size (value & volume) by key players, type, application, and region.

This report focuses on the top players in North America, Europe, China, Japan, Southeast Asia India and Other regions (Middle East & Africa, Central & South America).

A biopharmaceutical, also known as a biologic (al) medical product, biological, or biologic, is any pharmaceutical drug product manufactured in, extracted from, or semi synthesized from biological sources. Different from totally synthesized pharmaceuticals, they include vaccines, blood, blood components, allergenic, somatic cells, gene therapies, tissues, recombinant therapeutic protein, and living cells used in cell therapy. Biologics can be composed of sugars, proteins, or nucleic acids or complex combinations of these substances, or may be living cells or tissues. They (or their precursors or components) are isolated from living sources—human, animal, plant, fungal, or microbial.

It is costly to discover and develop new drugs/medicines due to expensive research processes, Costs associated with clinical trials, resource-intensive approval procedures and costs associated

With manufacturing (if the trials are successful).

An additional point is that European R&D costs are higher than in other world regions due to the fragmented European patent system. The implications of a fragmented patent system in Europe include high uncertainty, quality drop and prohibitive costs, which are at least four times higher than in the US, China and South Korea thus constituting a financial burden on especially small biopharmaceutical enterprises in Europe (van Pottelsberghe 2009).

The global Biopharmaceuticals market is valued at xx million US\$ in 2017 and will reach xx million US\$ by the end of 2025, growing at a CAGR of xx% during 2018-2025.
