## Abstracts

BOC-anhydride (CAS 24424-99-5), commonly known as Di-tert-butyl dicarbonate, is a reagent for the introduction of the Boc protecting group. BOC-anhydride is a reagent used for the introduction of BOC protecting group. It plays an important role in the preparation of 6-acetyl-1,2,3,4-tetrahydropyridine by reacting with 2-piperidone. It serves as a protecting group used in solid phase peptide synthesis.

The report titled 'Global BOC-anhydride Industry Report 2016' provides first hand industry information on the present market condition in the most genuine way, and forecast for BOC-anhydride in the world and in the top produce and consume regions. This report is a professional and in-depth research report for two aspects: production and sales, the report provides detailed information of production, supply, sales, demand, price, cost, income and revenue on BOC-anhydride in US, EU, China, Japan and rest of the world. Data including (both global and regions): Production (K Tons), Sales (both volume and value-million USD), Market Share, Consumption, Import, Export, price (USD/Ton), cost, gross margin and etc. And also, the feasibility of new investment projects is assessed, and overall research conclusions are offered.

In terms of production, the report gives ex-factory price, cost, production value and gross margin etc. of different types of BOC-anhydride produced in different regions and different manufacturers. In terms of sales, the report gives sales volume, sales price, cost, sales income, and profit margin etc. of BOC-anhydride used in different fields, sold in different regions and by different companies.

The past price of 2013-2016 and future price of 2016-2021 are analyzed according to the supply-demand relation, as well as perspectives and forecasts. Besides production and sales data, the report provides data on distributors and Buyers, giving readers an
