Abstracts

Epoxy resins are end products of a class of reactive polymers and prepolymers, which contains epoxide groups. Most of the epoxy resins are based on BPA (Bisphenol A), which cause several harmful effects to humans. Severe health disorders such as infecting female sex hormone, estrogen can be caused by BPA exposure. Hence, to avoid these kinds of health disorders BPA-free epoxy resins are used nowadays. BPA can be leached out of epoxy resins by extraction methods using either acidic materials or strong detergents. BPA-free epoxy resins possess different significant properties such as strong adhesion, chemical resistance, strength and toughness, proper and tensile strength which makes them suitable to be used in the manufacturing process of different end products. Flexibility in alteration of properties as per product requirement makes it suitable to be used in a wide variety of end products. Some industries where BPA-free epoxy resins find major applications are paints and coatings, varnishes, adhesives, electronics and electrical appliances, polymer industries, food and beverages, and automotive.

According to QYResearch's new survey, global BPA-free Epoxy Resin market is projected to reach US\$ 1181.2 million in 2029, increasing from US\$ 783 million in 2022, with the CAGR of 6.1% during the period of 2023 to 2029. Influencing issues, such as economy environments, COVID-19 and Russia-Ukraine War, have led to great market fluctuations in the past few years and are considered comprehensively in the whole BPA-free Epoxy Resin market research.

According to our survey, the global paints and coatings market is valued at \$174.3 billion in 2022. The waterborne segment led the market, holding the largest share of over 39%. Increasing spending in the construction industry and consumer preference for eco-friendly products are expected to support the segment's growth beyond the

expected period. By 2030, the global construction value is expected to grow by 85% to reach USD 15.5 trillion. The decorative coatings market accounts for approximately 45% of the \$75 billion global paints and coatings market. The demand for paints and coatings in the automotive industry is on the rise due to increased overall vehicle demand and aging vehicles. Paints and coatings for the automotive industry are also evolving. One such development is the use of smart coatings as they offer the potential to significantly improve surface durability while adding additional functions or properties such as self-healing, superhydrophobicity, self-layering, self-sensing, sound insulation, and vibration damping. Key market players PPG BASF Sherwin-Williams Diamond Paints has strengthened its market position by focusing primarily on the construction and automotive industries.
