## Abstracts

This report studies the global Braided Packing market status and forecast, categorizes the global Braided Packing market size (value & volume) by manufacturers, type, application, and region. This report focuses on the top manufacturers in North America, Europe, Japan, China, India, Southeast Asia and other regions (Central & South America, and Middle East & Africa).

Compression packing which is also called braided packing or rope packing. Braided packing is a rope like material which is cut into rings that wrap around the rod. Once installed the compression force generated by tightening of the gland produces radial pressure. Since braided packing expands radially when compressed, the gland tolerances can be more flexible than when using vee packing.

Braided packing is usually produced in a square or rectangular cross section and is braided from a range of different materials. Not only can compression packing vary by the material it is braided from, but the way in which it is braided can also vary.

Due to the wide range of braided packing application, such as in chemical, petroleum, food and sugar, pulp, paper and power industries, etc., the market size of braided packing will not shrink. From the view of application market, Pump packing and valve packing are the most active and potential fields.

In the price of products, customers still willing to pay more money to achieve products or service with higher quality. Therefore, it will become harder and harder for a new company which doesn't have its own core technology and R&D team to survive in this Technology-intensive battle.

The global Braided Packing market is valued at 4510 million US\$ in 2017 and will reach 5410 million US\$ by the end of 2025, growing at a CAGR of 2.6% during 2018-2025.
