## Abstracts

Brake Disc is the component of a disc brake against which the brake pads are applied. The material is typically grey iron, a form of cast iron. The design of the disc varies somewhat. Some are simply solid, but others are hollowed out with fins or vanes joining together the disc's two contact surfaces (usually included as part of a casting process). The weight and power of the vehicle determines the need for ventilated discs. The 'ventilated' disc design helps to dissipate the generated heat and is commonly used on the more-heavily-loaded front discs.

The global Brake Disc market is valued at 422 M units in 2017 and will reach 923 M units by the end of 2025, growing at a CAGR of 10.3% during 2018-2025.
