Abstracts

One of the simplest and abundant forms of plant life is algae, ranging from single cell microalgae to largest seaweeds. Algae protein is produced from several algae that is developed in both freshwaters as well as marines. Brown algae protein is majorly derived from seaweeds located in the colder waters within Northern hemisphere and is widely used as a substitute for animal protein, such as whey protein. Brown algae protein is a highly rich source of protein that contains all essential amino acids and minerals. Brown algae protein supports in improving thyroid function as it contains iodine and prevents several diseases such as thrombosis, arthritis, atherosclerosis, cancers, etc.

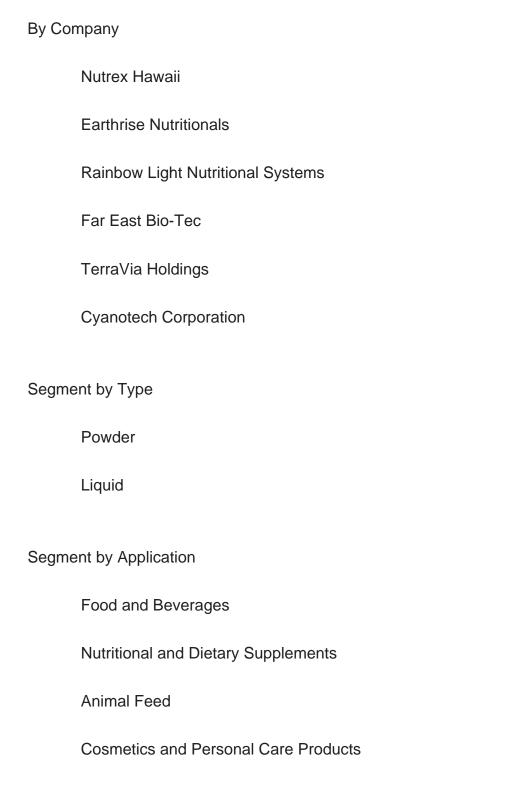

According to QYResearch's new survey, global Brown Algae Protein market is projected to reach US\$ 720.7 million in 2029, increasing from US\$ 436 million in 2022, with the CAGR of 7.5% during the period of 2023 to 2029.
