Builders' hardware, or just builders hardware, is a group of metal hardware specifically used for protection, decoration, and convenience in buildings. Building products do not make any part of a building; rather they support them and make them work. It usually supports fixtures like windows, doors, and cabinets. Common examples include door handles, door hinges, bolts, latches, numerals, letter plates, switch plates, and door knockers.

There are a vast number of producers all vying for market share and trying to take market share from each other. The major competition regions are EU, Asia-Pacific, Americas, especially from China, Mexico and Vietnam, etc. The cheaper labor in these countries makes the builder hardware production cost decrease. With globalization came lower trade barriers and therefore low cost builder hardware flooded the developed countries' builder hardware market making the local builder hardware industry struggle to survive.

Although builder hardware products bring a lot of opportunities, the study group recommends the new entrants just having money but without technical advantage and widely sales network do not to enter into this field.

The global Builder Hardware market is valued at 40000 million US\$ in 2017 and will reach 57600 million US\$ by the end of 2025, growing at a CAGR of 4.7% during 2018-2025.
